Internship

KARUNA BARUNA NUSANTARA

Duration: 6 Months (Mar 2021 - Sep 2021)
Main Languages used: PHP**,** HTML, CSS, JS, SQL
Other: Vue JS, React JS
Framework: Laravel, Wordpress

- **Full Stack Web Developer**
  Collaborated on developing back-end functions and front-end displays on several projects such as:

  - **Oscar Furniture** (oscarfurniturestore.com)
    - Developed Checkout Page that implements Shipper API to generate courier prices and Google Map API to display Google Map and retrieve customer's precise order location.

  - **Ladara E-Commerce** (ladara.id)
    Developed and Contributed on both administration and customer side of the project:
    - Developed both Front and Back-End of QRIS payment option by implementing QRIS API (https://qren.id/) and route the payment from customer to website admin and provide API call backs for Ladara Mobile.

    - Developed both Front and Back-End of the Mobile Data Top-Up Feature by implementing API provided by IAK as vendor (https://iak.id/) to display and provide customer with mobile data top-up option for the website, and handle the payments generated from the user into the website admin and provide API call backs for Ladara Mobile.

    - Contributed on Solving Bugs and Errors both from the client side and the administration side, both in Front-End and Back-End.

    - Developed Social Media Buttons on Product Detail Page to enable user to easily share the page.

    - Developed Excel Import Feature for Admins to be able to add products into the Database via Excel File Upload.

  - **Kalbe/Morinaga Partnership**

    - Developed Survey Form to detect the probability of a child to inherit allergy from their parents.

Contract   **INDOMARET GROUP**

Duration: 1 Year (Feb 2022 - Feb 2023)
Main Languages used: PHP**,** HTML, CSS, JS, SQL
Other: PL/SQL
Framework: Laravel

- **Software Developer**
  Collaborated and developed internal programs used for Indogrosir's transactions and data manipulation for paperwork and database needs, such as:

  - Branch Delivery
  - Goods Receive Notes
  - PO handling
  - SKU handling
  - Template handling for master signatures
  - FTP flow handling
  - CRON Scheduler for Job tasking using PHP

Programs are made fully with Laravel as framework with PHP and JS as Back-end tools coupled with HTML and CSS as Front-end tools.

Programs are originally made with oracle forms, thus our team are tasked to migrate them to newer technology.

Full-time   **INDOMARET GROUP**

Duration: Feb 2023 - **Present**
Main Languages used: PHP**,** HTML, CSS, JS, SQL
Other: PL/SQL, Express JS, PostgreSQL, AWS
Framework: Laravel

- **Software Developer**
  Continue developing and bug-fix existing programs while implementing API to several programs powered with Express JS to replace several Oracle procedures that are obsolete while migrating the database to PostgreSQL with AWS as cloud platform.

  Remade CRON scheduler from PHP based to Express JS based.

Side Projects

GLOBAL PIPLASINDO

Duration: 3 Months (Sep 2023 - Nov 2023)
Main Languages used: TS, JS, CSS
Other: SQL, Google OAuth
Framework: Prisma, Vercel, React JS, Tailwind CSS, PostgreSQL, NextJS

- **Full-stack Web Developer**
  Link: https://www.globalpintu.com/

  Developed a product catalogue website to showcase products with NextJS.

  I used Prisma as Database ORM with TypeScript as the main language used for Back-end and ReactJS framework as front-end with Tailwind CSS as styling helper.

  For deployment, I utilized Vercel and Vercel Potsgres as database so that they can all be hosted in one place.

  I also added admin page so that user are able to do CRUD operations to manipulate the products in the catalogue.

  NextAuth is implemented as the security measure that Implements Google OAuth with only select Google accounts that are able to login as Admin
